

Kitty Module — Staff Manual

Gold savings schemes, payments, draws, redemptions & WhatsApp messaging —
complete reference

Sun Sea Jewellers, Karol Bagh

Internal document · September 2026

Contents

1. What is Kitty	schemes overview
2. Kitty Admin — the 11 tabs	what each tab is for
3. Every action, what it does	full function list
4. Every WhatsApp message — full text	trigger + exact wording
5. How resend / Pending Messages works	queueing, nudges, Send All
6. Common staff workflows, step by step	enroll → pay → draw → redeem
7. Rules, guardrails & things that will refuse to work	and why

1. What is Kitty

Kitty is Sun Sea's gold-savings module — members pay monthly, gold is booked at a rate, and at the end they redeem jewellery/raw gold. Everything lives in **Kitty Admin** (open from the main CRM nav).

The schemes

Scheme	How it works	Redemption
Gullak	Flexible monthly amount (₹5,000 multiples), gram-based, rate booked per payment or via monthly bulk rate.	Jewellery or raw gold, or sell back any time.
Swarn Suraksha	Online checkout scheme — captures the <i>live</i> rate at the exact moment of each payment. RBI guidance caps it at 11 months; auto-freezes and nudges redemption after that.	In-store only.
Golden Sparkle	Rate-lock scheme — everyone who pays in a given month gets that month's single booked rate (staff punches it once via "Set monthly rate", not per person).	Jewellery / raw gold.
Mission 100	Group gold-race — groups of 10 or 20, checkpoints at 25/50/75/100g, bonus coins for checkpoints + finishing + referrals, one winner per group at 100g. Sells only 1g coins.	Group prize + individual gold.
Gold Tally	Not a scheme — a read-only dashboard summing gold held across all gram-based schemes (with-company vs with-client split).	—
Legacy Members	Old pre-CRM kitty members hand-entered so the system starts reminding them to claim their already-paid-up scheme.	Whatever the old scheme promised.

Gold weight is always derived, never stored directly: $\text{grams} = \text{paid_amount} \div \text{rate_locked}$, summed across every paid/free installment. If weight looks wrong, the rate is wrong — check the rate, not the grams.

2. Kitty Admin — the tabs

Tab	What you do here
Overview	Per-scheme member/payment stats + a worklist of pending payments with an on-demand "send reminder now" button (doesn't wait for the 3-day-before cron).
Schemes	Create/edit/deactivate schemes — name, monthly amount, duration, perks (JSON toggles: lucky draw, gold-coin chance, rate-lock, etc). Drives what shows publicly on ssj.in.
Enroll New Member	Direct in-store signup — no prior online interest needed. Can backfill already-paid months if the member actually started earlier.
Enrollments	Full list, every scheme — confirm, mark paid, add/edit installments, toggle possession, deliver coins, redeem, cancel, delete, change scheme, merge duplicates.
Gullak / Swarn Suraksha / Golden Sparkle	Same Enrollments screen, pre-filtered to one scheme — plus a possession-split summary and (Gullak/Golden Sparkle) the monthly bulk-rate box.
Mission 100	Separate admin screen — create groups, assign members, start a group, declare winners, set prize status, award manual bonus coins.
Gold Tally	Read-only — total gold across all gram-based schemes, split with-company vs with-client, per scheme.
Add Legacy Member	Hand-enter an old, already-completed kitty from before the CRM existed. Starts the unclaimed-benefit reminder cycle.
 Pending Messages	<i>New.</i> Every Kitty WhatsApp that failed to send — retry one at a time or all at once. See §5.
Activity Log	Full audit trail — every enrollment, payment, redemption, edit, and system action, who did it, when. <code>system:cron</code> = automated.

3. Every action, what it does

Grouped by area. These are the underlying API actions (`/api/kitty?action=...`) that every button in Kitty Admin calls — listed here so you know exactly what any button actually does.

Schemes

- **List schemes** (public) — active schemes only, feeds the ssj.in scheme cards.
- **Admin list schemes** — all schemes including inactive.
- **Create / Update / Delete scheme** — define name, monthly amount, duration, perks JSON.

Enrollment lifecycle

- **Enroll new member** — direct in-store signup; optional backfill of already-paid months.
- **Confirm enrollment** — generates the full installment schedule (one row per month from the start date) and activates it.
- **Cancel enrollment** — stops it, no further reminders.
- **Change scheme** — corrects a wrongly-picked scheme; blocked once any installment is paid.
- **Delete enrollment** — hard delete for a genuine duplicate; blocked once any installment is paid (force-override available for confirmed duplicates).
- **Merge enrollments** — moves every installment from one enrollment onto another (renumbered), cancels the source. Same scheme required. Use when staff accidentally created two enrollments for the same person in the same scheme.
- **Merge duplicate contacts** (Contacts screen, not Kitty screen) — combines two duplicate *contact* records into one, now also carries the Kitty enrollment across so it doesn't get orphaned. See §7.

Payments

- **Mark installment paid** — records a payment; rate can be typed (rate-lock schemes) or derived from grams entered (fractional schemes).
- **Add installment** — for backdated/extra payments outside the normal schedule.
- **Update installment** — fix amount, due date, status, payment method/remarks, or the locked rate directly (shift+click a member's month chip).
- **Set monthly rate** — bulk-books one ₹/g rate for every already-paid installment of a scheme in a chosen month (Gullak/Golden Sparkle). Shows a preview of total ₹ → total grams before applying. **Now WhatsApps every affected member** — see §4.

Gold possession & delivery

- **Toggle possession** — mark a settled installment's gold as "with company" (bought, not yet collected) or "with client" (handed over).
- **Deliver coins** — hands over some or all with-company gold; FIFO across installments, splits one installment if the requested grams lands partway through it.

Redemption (two-step, code-verified)

- **Initiate redemption** — generates a 6-digit code, WhatsApps it to the member (staff never sees the code).

- **Confirm redemption** — staff asks the member to read the code aloud, enters it; completes the redemption and sends a thank-you message.

Lucky-draw batches (Golden Bliss/Bloom-style schemes)

- **Record draw** — logs the month's winner(s); **waives all remaining unpaid installments** for the winner (per the "don't pay ahead if you win" card rule).
- **Close batch** — no more enrollments into that round.

Mission 100

- **Create group, assign member, start group** — set up a 10 or 20-person racing group.
- **Declare winner** — records who won a checkpoint (25/50/75/100g).
- **Set prize status, award bonus** — manage the trip-prize state and hand out manual bonus coins.
- Checkpoints, the completion bonus, and referral bonuses are otherwise fully automatic (cron) — see §4.

Legacy members

- **Add legacy member** — hand-enter someone with an old, already-completed kitty; starts unclaimed reminders immediately.
- **Add / list legacy names** — the free-text "which old scheme" list, built up as staff enter people.

Pending messages (new)

- **List pending messages** — every queued (failed-to-send) Kitty WhatsApp.
- **Send pending message** — retries one.

Everything else

- **Admin list audit log** — the Activity Log tab's data, filterable by type.

4. Every WhatsApp message — what triggers it, exact text

All Kitty messages send from the same WhatsApp session (client id: Kitty). Member's DND flag is always checked first — if they've opted out, nothing sends and nothing gets queued.

Automatic — daily cron (once a day, all schemes)

① **Installment due reminder** — fires 3 days before a due date, once (won't repeat once sent).

 Reminder: your [Scheme] installment #[N] of ₹[amount] is due on [date].
- Sun Sea Jewellers, Karol Bagh

② **Unclaimed-benefit reminder** — scheme is complete but not picked up; repeats every 14 days until staff marks it claimed.

 Your [Scheme] is complete and waiting to be claimed! Visit Sun Sea Jewellers, Karol Bagh to pick your jewellery/benefit whenever convenient.
- Sun Sea Jewellers

③ **Lucky-draw batch round completed** — sent to every member once a batch's full term has elapsed.

 Your [Scheme] ([Batch label]) round has completed! Enroll for the next round anytime — visit <https://ssj.in/kitty-schemes> or reply here.
- Sun Sea Jewellers, Karol Bagh

④ **Swarn Suraksha 11-month freeze** — auto-fires once the RBI-guidance 11-month cap is hit.

 Your [Scheme] scheme has completed its 11-month term and is now ready to redeem — visit Sun Sea Jewellers, Karol Bagh to collect (redemption is in-store only). Want to keep saving? Start a fresh Swarn Suraksha anytime.
- Sun Sea Jewellers

⑤–⑧ **Mission 100** (all automatic, idempotent — never double-sends):

 You've completed all 100 coins in Mission 100 — +1g free bonus added, 101g total in hand!
- Sun Sea Jewellers, Karol Bagh

 You're first in your Mission 100 group to reach [25/50/75]g! +1g free bonus coin added.
- Sun Sea Jewellers, Karol Bagh

 [Winner:] Congratulations — you're first in "[Group]" to complete Mission 100! You've won [trip prize] (pending confirmation). Our team will be in touch.
 [Everyone else:] Mission 100 winner declared in "[Group]"! One of your group finished first and won [trip prize]. Keep going — your own checkpoints and completion bonus are still yours to win.
- Sun Sea Jewellers, Karol Bagh

 You've referred [N] friends into Mission 100 who've each hit their first checkpoint — +[N]g free bonus coin(s) added!

- Sun Sea Jewellers, Karol Bagh

Staff-triggered, on demand

⑨ **On-demand due reminder** (Overview tab, pending-payments list) — same text as ①, sent right now instead of waiting for the 3-day-before cron.

⑩ **Monthly rate booked** — fires when staff uses "Set monthly rate". One message per affected member (combined if they have multiple rows that month).

📢 [Scheme] — [Month Year] rate booked: ₹[rate]/g
Your ₹[amount] this month = [grams]g added.
- Sun Sea Jewellers, Karol Bagh

⑪ **Redemption code** — sent when staff initiates a redemption. Time-sensitive, valid 30 minutes.

📢 You're redeeming your [Scheme] [worth ₹X / item].

To confirm, share this code with our staff: *[6-digit code]*
(Valid 30 minutes — don't share it with anyone else.)
- Sun Sea Jewellers, Karol Bagh

⑫ **Redemption thank-you** — sent right after staff confirms the code and completes the redemption.

👤 Thank you! Your [Scheme] has been redeemed successfully.
- Sun Sea Jewellers, Karol Bagh

Not queueable: the redemption code (⑪) is deliberately excluded from the pending-message queue — it expires in 30 minutes, so retrying it later would just resend a dead code. If it fails, staff sees an immediate error and should retry right there.

5. How resend / Pending Messages works

Why a message might not send

- WhatsApp session (Baileys, on the NAS) is disconnected or crash-looping.
- Member's number is invalid/unreachable.
- Any other transient send failure.

What happens automatically

1. Every send above (except the redemption code) goes through one shared helper. If it fails, the message is **saved** — not lost — into a pending queue with the phone, the full message text, why it failed, and how many times it's been tried.
2. Once a day, the cron checks: any pending messages? If yes, it WhatsApps **all superadmins/admins** + the owner number — *on a different WhatsApp channel (WbizTool) than the one that's usually broken*, so the alert itself doesn't depend on the failing session.

🔔 [N] Kitty message(s) pending (couldn't send — WA session down or number issue). Open Kitty Admin → Pending Messages → Send Now to retry.

What staff does — Kitty Admin → 📄 Pending Messages

Column	Meaning
Queued	When it first failed.
Type	Due reminder / rate booked / redemption thank-you / Mission 100 event / etc.
To	Member name + phone.
Message	Exact text that will go out (hover to see the full thing).
Last error	Why the last attempt failed.
Attempts	How many times retried.

- **Send** (per row) — retries just that one message immediately.
- **Send All** — retries everything in the list, **one at a time, ~3 seconds apart (with a little random jitter)** — never fires a burst, same anti-WhatsApp-ban spacing used for broadcast campaigns. Shows live progress (✓ sent / X still-failed) and can be cancelled mid-run (finishes the current one, then stops).
- Sent messages disappear from the list automatically (their status flips to **sent**). Still-failing ones stay, with the attempt count going up.

Nothing in this list means everything is going out fine — you do not need to check it daily. The admin WhatsApp nudge (above) is what tells you when to look.

6. Common staff workflows, step by step

Enroll a new member

1. Kitty Admin → **Enroll New Member**.
2. Fill name, phone, pick scheme, start date. If they already paid some months before joining the system, add those under "Backfill already-paid months".
3. Submit — this both creates the enrollment *and* confirms it (generates the full installment schedule) in one step.

Record a monthly payment

1. Open the member in **Enrollments** (or a scheme-specific tab), expand them, click the "due" chip for that month.
2. Enter amount received, payment method, remarks. For rate-lock schemes, enter the rate if prompted; for gram schemes, the rate is derived from grams.

Book this month's rate for a whole Golden Sparkle/Gullak kitty (instead of typing it per person)

1. Go to that scheme's tab, find "Rate month" + "💰 Set [month] rate" button.
2. Enter the day's ₹/g rate. A preview shows how many payments, total ₹, and total grams it'll produce — check this before confirming.
3. Confirm — applies to every already-paid installment that month, and WhatsApps every affected member their rate + grams added (₹4, message ⑩).
4. To fix one person's rate afterward without touching everyone else: open their row, shift+click their month chip, change the rate directly there.

Redeem a member's scheme

1. Open the member → **Redeem**. Choose redemption type, item/value.
2. A code is generated and sent to the member's WhatsApp — staff does not see it.
3. Ask the member to read the code aloud; enter it in **Confirm Redemption**.
4. On match, the redemption completes and a thank-you message goes out automatically.

Hand things over physically

Toggle a settled month's possession pill (🏠 with company ↔ 🤝 with client) once gold is actually collected. For partial pickups, use "Deliver coins" and enter the grams — it splits installments automatically if needed.

Fix a duplicate

Same person, two contact records (e.g. staff typo'd the phone once) → Contacts screen → Merge duplicate contacts. Now also carries any Kitty enrollment along automatically.

Same person, two enrollments in the same scheme → Kitty → merge-enrollments (via the enrollment's own duplicate-merge action) — moves all installments onto one, cancels the other.

Handle a pending-message alert

1. You get a WhatsApp: "N Kitty messages pending".

2. Kitty Admin →  Pending Messages.

3. If it's a handful, click **Send** on each. If it's many, click **Send All** and let it pace itself — check back in a minute.

4. If sends keep failing, the WA session itself is likely down — check Connections screen / ask whoever manages the NAS to look at the container.

7. Rules, guardrails & things that will refuse to work

- **Can't delete an enrollment with paid installments** — cancel it instead, or force-delete only if staff is certain it's a duplicate data entry (not real double-collected money).
- **Can't change scheme once anything is paid** — cancel and re-enroll instead, to preserve payment history.
- **Merge-enrollments requires the same scheme** on both sides.
- **Rate must be a whole number, ₹5,000–₹35,000/g** — a decimal almost always means someone typed a grams value into the rate field by mistake (this caused a real 1000× overstatement incident once — the guardrail exists because of it).
- **Weight must be 0.001g–999.999g** — max 3 digits before the decimal, 3 after.
- **Only Swarn Suraksha allows fractional/any-amount gold** — every other gram scheme sells whole-gram coins only (1g, 2g, 5g, 10g...).
- **Set-monthly-rate refuses on Swarn Suraksha / Mission 100** — those already capture the true live rate at the exact moment of each payment; a bulk overwrite there would corrupt correct data, not fix anything.
- **Set-monthly-rate matches by due date, not payment date** — a payment entered late (backfilled) still lands in the correct calendar month's rate, because due dates are fixed at enrollment and don't drift with when staff happened to type it in.
- **Redemption needs the member's own verbal code** — proves they themselves requested it, not just whoever has CRM access.
- **Draw winners are waived from all remaining installments** (lucky-draw batch schemes only) — "don't pay ahead if you win" is the card rule for those specific schemes. Mission 100 and rate-lock schemes work differently — winners there get bonus coins, not a payment waiver.
- **DND members never get messaged**, and nothing on their behalf enters the pending queue either.
